ABSTRACT

Baby Planet is an online baby care shop where baby products of children are sold.Baby products includes shampoos,lotions,oils,powders,creams,toys and dresses and many more.At present there are existing system which may diverse as retail baby care shops and online shopping sites to ensure distribution but the quality of products are not ensured. As the products are being used mostly for small baby it must be handled with at most care .The proposed system assures the quality of the product by selecting branded and highly tested items to the shop.We make ensure that all the ingredients of the products that are sold in our shop are of high quality.

The users of the system are admin and users.Admin has the overall control over the system,he can add baby products ,can view the products ,gets notification about limited stock,can view the status of the ordered and delivered products and can enable and disable the products according to their availability,They can can view the registered users to the system and can delete them as and when required.The users can register to the system and can view information's about the products available and they can purchase items using online payment and add to cart and can change their existing passwords if required.They also can view the status of their ordered products.
